SKILLS

Languages/Libraries:

- Python
- Sklearn
- pandas
- NumPy
- NLTK
- Transformers
- Tensorflow
- PyTorch
- OpenCV
- Flask
- Rest API

Generative AI

- Large Language Model: LLM
- Embedding
- Langchain
- Llama index
- Vector DB
- Semantic Search
- RAG Building
- Prompt Engineering
- Quantization
- AI Chatbot
- LLMops

Natural Language Processing: NLP, Machine Learning

Abhimanyu Singh

GenAI AI-ML Developer

PROFILE

Gen-AI/AI-ML Developer with 2.5+ years of experience in Generative AI, Machine Learning and Deep Learning. Skilled in developing innovative solutions using advanced AI techniques. Proficient in Python, NLP, and various AI frameworks. Passionate about leveraging data to drive insights and solutions.

PROFESSIONAL EXPERIENCE

Programmer Analyst

Cognizant Technology Solutions

February 2025 - Present

Project 1 : RCA Agent

Tech Stack: Azure OpenAI Gpt-4o, Langchain, Azure AI Vision, ChromaDB, Hybrid Search RAG, FastAPI

- Created a data extraction tool to fetch the user the root cause analysis and its detailed description for a particular error type.
- Used hybrid search RAG with ChromaDB as the vector store and achieved an accuracy of over 95%.
- Integrated the code with the UI using FastAPI.

Project 2 : Gilead Data Query Agent

Tech Stack: Azure OpenAI Gpt-5, Langchain, Postgres, FastAPI, NeMo Guardrails

- Created a Text2SQL Agent for Gilead to fetch the user the required data from the Postgres database.

Stemming, Lemmatization, NLTK, Gensim, RNN, LSTM, TF-IDF, BOW, Word2Vec, NER, BERT, DistilBERT, RoBERTa.

Deep Learning, Computer Vision

Keras, TensorFlow, Pytorch, OpenCV, CNN, ResNet, Optical Character Recognition(OCR), CUDA...

Cloud

Azure

Web App/ API Development

Flask, FastAPI, Streamlit

EDUCATION

Bachelor Of Technology (CS with AI)

Rajasthan Technical University, Kota

CGPA: 8.4/10

July 2022

- Used advanced prompt engineering techniques and Nvidia NeMo guardrails to achieve optimal results.
- Used Python and FastAPI in the backend.

Project 3: Log Analysis Agent

Tech Stack: Azure OpenAI, Langgraph, FastAPI, ChromaDB

- Created an application-level log analysis agent using LLM and hybrid RAG
- Automated ServiceNow ticket creation and updation by analyzing log files based on ticket descriptions.
- Used dynamic and live chunking using watchdog observers and collection mapping based on user queries.
- Created websocket and POST endpoints using FastAPI.

GenAI AI-ML Developer HCL Technologies Ltd

July 2022 - February 2025

Project 1 : Pfizer *i-harmonize*

Tech Stack: *Python, NLP, OpenAI, Flask, Faiss, Git*

- Developed scalable, reusable code with OOP principles and utilized NLP techniques using OpenAI embedding models.
- Created Rest API using Flask, enabled Cross Origin Resource Sharing using Flask-CORS.
- Implemented advanced semantic search to fetch HSN codes of the respective product.

Project 2: EVA Nexus - RAG / Text2SQL

Tech Stack: *Prompt Engineering, Vector Database, Azure OpenAI, Open Source LLMs, Chroma DB, Quantization, Langchain, Llama index, Streamlit*

- Developed Eva-Nexus tool for HCL Technologies Ltd, an end-to-end data extraction tool from unstructured as well as labelled data using RAG (Retrieval Augmented Generation) and Text2SQL.

- The tool enabled users to fetch data from unstructured documents or database/csv/excel using natural language.
- Used Langchain agents and advanced prompting techniques to effectively optimize the LLM's output.
- Used Streamlit to create the UI of the tool.

Project 3: Xerox Document Classification and Extraction

Tech Stack: Llama3.2-vision, Langchain, PaddleOCR, Prompt Engineering, RoBERTa Text Classification model, Gpu multiprocessing

- Performed document digitization of scanned documents using PaddlePaddle-Gpu.
- Classified in-scope and out-of-scope agreements from larger PDF documents using RoBERTa text classification.
- Extracted metadata from in-scope agreements using Llama3.2-vision LLM.

ACCOMPLISHMENTS

- LLM0ps, DeepLearning.AI
- Introduction to LLMs, Coursera
- Applied Machine Learning in Python, Coursera
- Developing AI Applications with Python and Flask, Coursera
